All the districts

No./ DRE/HAREDA/2018/

Dated:

SUBJECT: CLARIFICATION REGARDING INSTALLATION & COMMISSIONING OF GRID CONNECTED ROOFTOP SOLAR POWER PLANTS IN COURT BUILDINGS.

It has been observed that different Project Officers have different interpretation on commissioning of the solar power plant under net metering system. Various offices including this office had placed the order to the firms on rate contract for setting up the plant under net metering mechanism. The firms have to supply and install the system in time as given in the rate contract/work orders but in most of the cases installation of bi-directional meter with system under net metering takes 3-4 months time. All are aware that delays in net metering process is normal phenomenon in the State inspite of several meetings and directions of Govt. to DISCOM; the procedure is not yet improved.

Now it has been decided that the firms should not be penalized for delay in part of work to be done by DISCOM. The date on which power is generated from solar system can be seen at inverter point and should be considered as date of the commissioning of the system.
